

## HOW TO INSTALL THE EA:

Then go to File → Open Data Folder → MQL4/MQL5 → Libraries. Copy here ForexStore\_1.4.dll file (if you use MT4), or ForexStore\_MT5\_1.4.dll file (if you use MT5) from the archive. Reboot your MT4/MT5 terminal.

☒ Allow import of external experts

☒ Allow modification of Signals settings

☒ Allow Algo Trading

OK Cancel Reset

Choose Inputs tab, specify your desired risk, if needed (more information about all the parameters you can find below), or keep the recommended default settings. We recommend to set the risk up to 35% (RiskLimit=35). Minimum deposit for the EA is \$700 for 0.01 lot.  
Make sure that AutoTrading is enabled and the symbol ">" is running:

## NOW YOU ARE READY TO START!

## HERE YOU CAN READ MORE ABOUT ALL THE PARAMETERS OF MARKETFIGHTER:

**AutoRisk** – the money management of MarketFighter. If “true” the EA will set lot size automatically, based on your deposit and the risk you set. If “false” the EA will use lot size, which you can set manually in StartLot.

**RiskLimit** – a part of your deposit (in percentage) which the EA will use for trading. Doesn’t work if AutoRisk is “false”. The minimum deposit which is required for the EA equals to 100% risk. To be able to trade with a lower risk your deposit should be bigger than the required deposits. For trading with the recommended 35% risk your deposit should be \$2000.

**StartLot** – lot size, which you can set manually. Doesn’t work if “AutoRisk” is “true”.

**Drawdown Control** – if “true” the EA works as usual and limits a drawdown. If “false” the EA removes all StopLosses and stops limiting a drawdown. It helps to wait for a rollback to clients who are willing to take that risk.

**Slippage** – slippage, which you can set manually.

**NFA** – if “Yes”, the EA will disable opening of possible opposite trades (no hedge) and apply FIFO rule. If “No”, the EA will trade without NFA limitations. **Hide Stops** will hide SL and TP for all orders, if that is needed, and the EA will close trades in the necessary moments at their Market prices, same as on our account. Please notice, despite the fact of enabling NFA option, some brokers may show a FIFO error from time to time, but it is not dangerous for the logic of the EA.

MT5 version of the EA has an additional parameter - **Order\_Filling\_Type**:

**ORDER\_FILLING\_FOK** – an order can be filled only in the specified amount. That is a recommended default mode for a guaranteed proper work of the original strategy.

**ORDER\_FILLING\_IOC** – a trader agrees to execute a deal with the volume maximally available in the market. In case of using this mode, there could be a violation in the strategy of the EA, and we cannot guarantee a proper operation of the system in all kind of situations. Use this mode only if the default FOK mode is forbidden and you are ready to put up with possible deviations in the strategy.

**ORDER\_FILLING\_RETURN** – in case of partial filling an order with remaining volume is not canceled but processed further. In case of using this mode, there could be a violation in the strategy of the EA, and we cannot guarantee a proper operation of the system in all kind of situations. Use this mode only if the default FOK mode is forbidden and you are ready to put up with possible deviations in the strategy.
